Dylan Eleven • Truth11.com

We have posted this information from Dr Robert Young in several articles in the past. His understanding of the corona effect and what is happening in the blood is the most accurate evaluation of the subject I have found. Graphene oxide from the vaccines, our food and water supply and chemtrails reacts with 4G and 5G to cause clotting in the blood. People are not shedding they are emitting radiation that affect

Subscribe

them. The corona effect is explained and it is not a virus. It is a reaction to graphene oxide and radiation.

His explanation gets to the core truth about what Covid actually is. It is not a virus. As we have stated since spring of 2020.

This is a written explanation from a different article and video:

Dr Robert Young

Graphene is a biosensor, which means it can receive and transmit. So there is no shedding here. When someone becomes poisoned with graphene, they become a human cell tower. And they are receiving radiation and emitting radiation which affects (them and) everyone else around them.

Radiation poisoning in combination with graphene oxide, causes cellular disruption, disorganization, and death. And the waste products of that, lower the PH to the point where the body has to activate. And its called the clotting cascade. And the clotting cascade that is taking place is to try to prevent internal bleeding from the damage of this declining PH caused by the radiation amplified by the graphene oxide.

So simply when we understand that the Flu is not a disease, and its not viral centred.

The flu is a symptom of detoxification of increasing body temperature to remove acidic waste products in order to maintain the alkaline design of the human body field, the bio field. If it doesn't then you die.

And this is what's happening to people, their cells are breaking down, because they've been impregnated with graphene oxide. Graphene oxide has been put in air, in the food, in the water, and now making things even worse it is injected.

And then when radiation is present there, it amplifies this thing, which then leads to cell membrane deterioration, what is called the corona effect. Then a higher valiance of that is called the spike protein effect.

So red blood cells should be swimming in their own fluid. That is called vascular fluid.

And the red blood cells should be even in colour, even in shape, even in size. See how nice these red blood cells look?

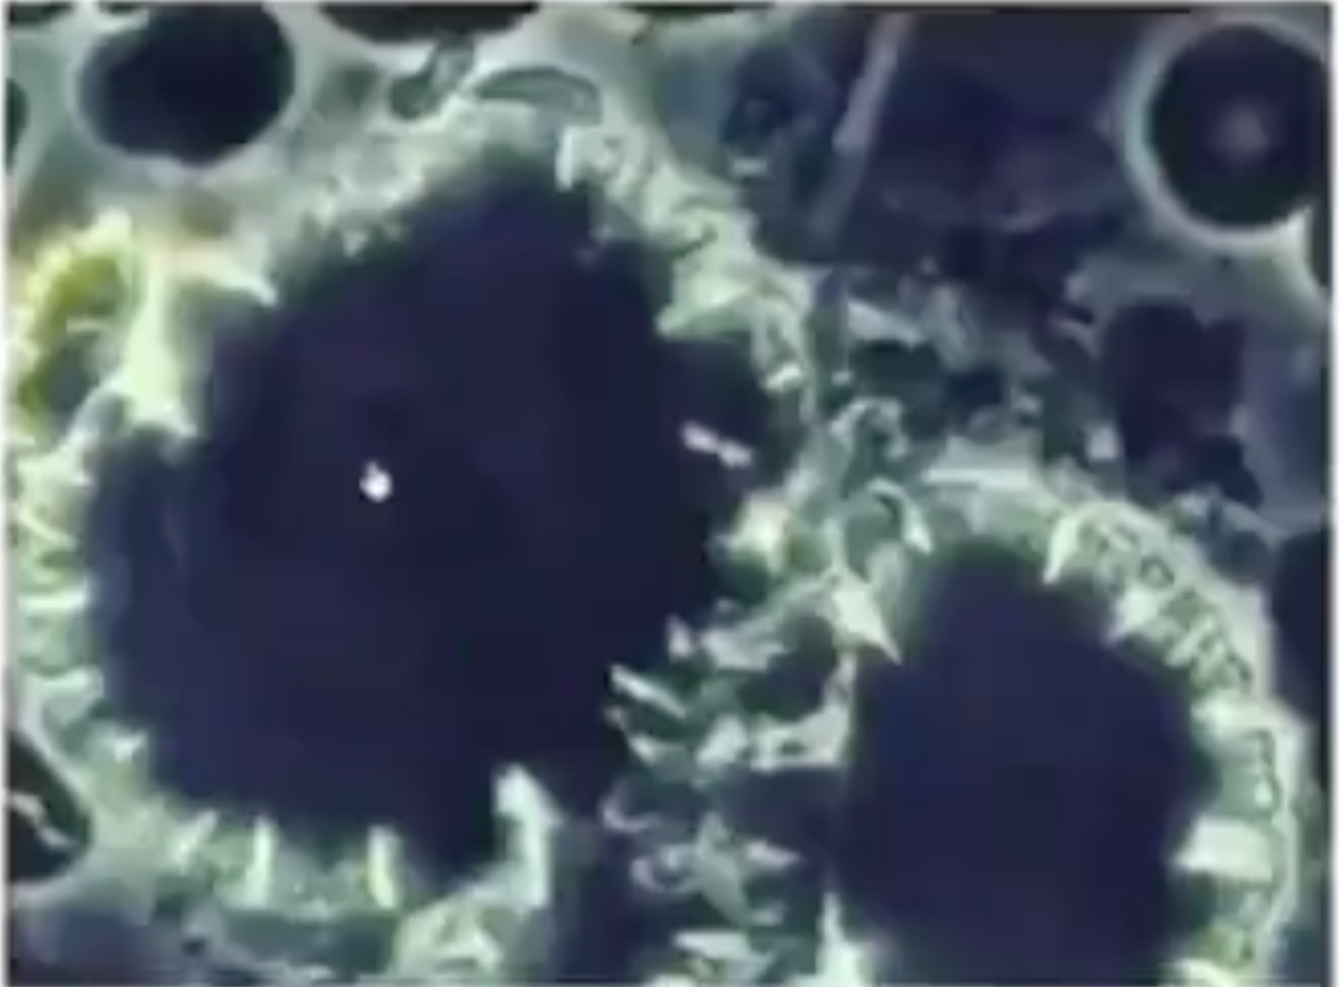

Normal Healthy Live Blood Before mRNA CoVid - 19 Inoculation

Figure 1: Micrograph of Normal Healthy Blood, showing numerous red blood cells with no dark spots, no clots and no debris. (Red Blood Cells, with nuclei, are visible throughout. From: Robert C. Young, "Radical Medical Research: New Blood Building, 1987, 2005")

Now look what happens when they are exposed to graphene oxide and radiation. This is a reduced graphene oxide cluster. I call it a cluster bomb. And look what the blood is doing around it. It is clotting. That is what this does.

Inoculation Revealing Enlarged Crystallized Red Blood Cells Containing rGO or Graphene Hydroxide

They are giant red blood cells that have crystallized by the fact they have been crystallized with chemical and radiation poisoning. And off to the left here is ((ferric)?) dioxide, so these are the cells, and you can see all the graphene oxide around this. Its looks like a war zone, and this is why people are getting sick.

And it can be a delayed reaction depending on what they are eating, what they are drinking, what they are breathing, you can be exposed by aerosol, on the PCR test swabs, you can drink it in the water. In common brands.
